**Brake Bleeders**

Also suitable for bleeding other closed fluid systems

www.pclairtechnology.com
Brake Bleeders

PCL Brake Bleeders are used for bleeding and refilling the brake systems of all types of vehicles, quickly and cleanly by a single person.

They are also suitable for bleeding other closed fluid systems. However, they must never be used for explosive fluids, i.e. petrol and acetone.

- Simple, single person operation
- Quick, clean and efficient
- Does not require specialised brake reservoir caps
- Draws fluid from the bleed nipple enabling either bleeding or full replacement of fluid in system
